## psidialogs

**Date** November 21, 2011

**PDF** psidialogs.pdf

Contents:

psidialogs (Python Simple Dialogs) is a common API for different standard dialogs like:

- message
- warning
- ask\_string
- ...

### Backends:

- PyGTK
- Zenity
- easygui
- gMessage
- PyQt
- TkInter
- wxPython
- PythonDialog
- console
- EasyDialogs

### Links:

- home: <https://github.com/ponty/psidialogs>
- documentation: <http://ponty.github.com/psidialogs>

Some dialogs are too simple, because a common basic implementation is used where implementation is missing.

# BASIC USAGE

```
>>> from psidialogs import message
>>> message('Hello!')
```

# INSTALLATION

## 2.1 General

- install `setuptools` or `pip`
- install the program:

if you have `setuptools` installed:

```
# as root
easy_install psidialogs
```

if you have `pip` installed:

```
# as root
pip install psidialogs
```

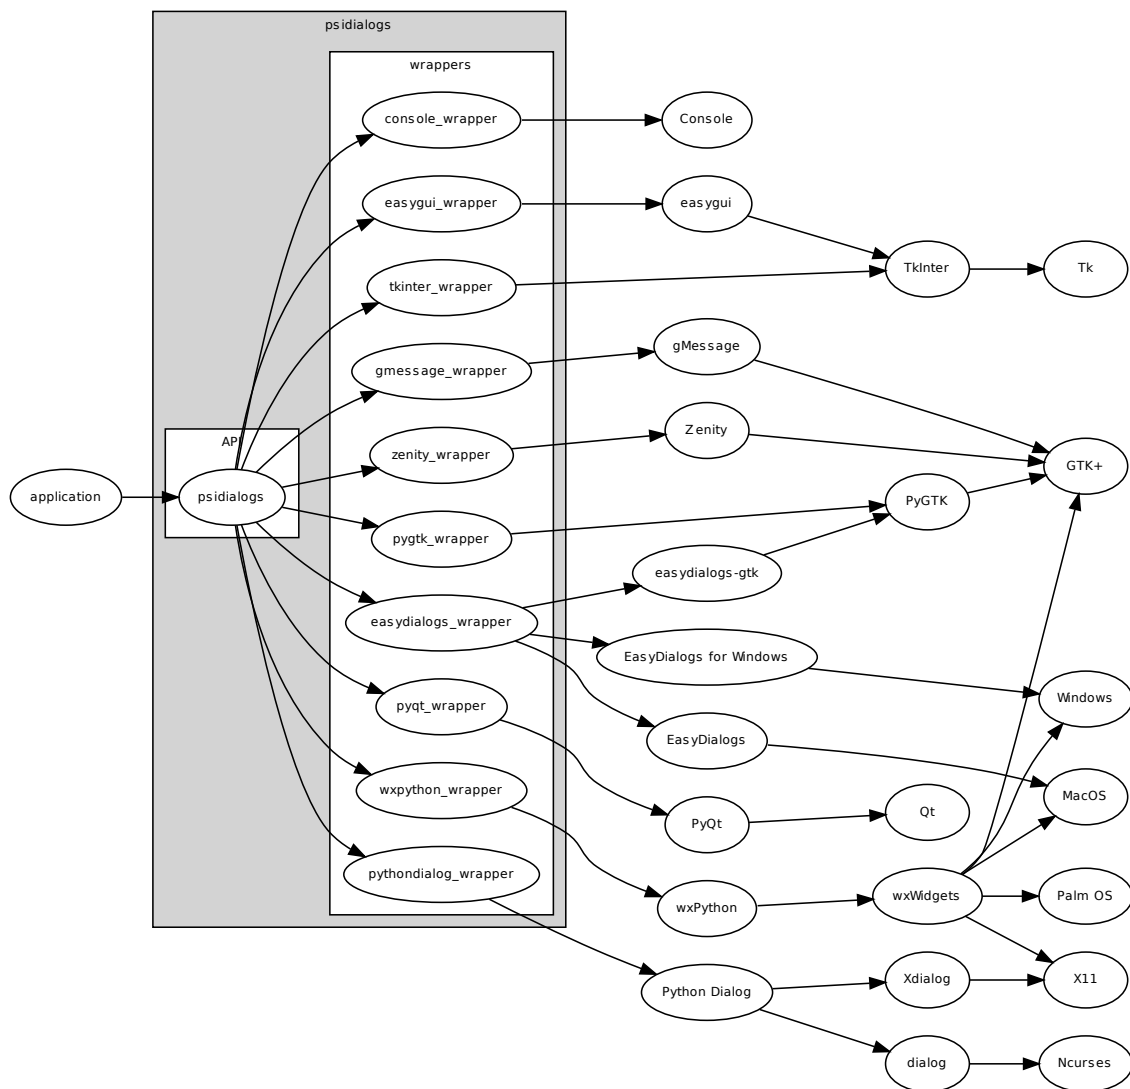

## 2.2 Ubuntu

```
sudo apt-get install python-setuptools
sudo easy_install psidialogs
```

## 2.3 Uninstall

```
# as root
pip uninstall psidialogs
```

# HIERARCHY

# API

## 4.1 ask\_file()

`psidialogs.ask_file(message='Select file for open.', default='', title='', save=False)`

A dialog to get a file name. The “default” argument specifies a file path.

save=False -> file for loading save=True -> file for saving

Returns the file path that the user entered, or None if he cancels the operation.

### Parameters

- **message** – message to be displayed.
- **save** – bool 0 -> load , 1 -> save
- **title** – window title
- **default** – default file path

**Return type** None or string

## 4.2 ask\_folder()

`psidialogs.ask_folder(message='Select folder.', default='', title='')`

A dialog to get a directory name. Returns the name of a directory, or None if user chose to cancel. If the “default” argument specifies a directory name, and that directory exists, then the dialog box will start with that directory.

### Parameters

- **message** – message to be displayed.
- **title** – window title
- **default** – default folder path
- **ok** – label of the ok button
- **cancel** – label of the cancel button

**Return type** None or string

## 4.3 ask\_ok\_cancel()

`psidialogs.ask_ok_cancel (message='', default=0, title='')`

Display a message with choices of OK and Cancel.

**returned value:** OK -> True Cancel -> False

*screenshots*

### Parameters

- **message** – message to be displayed.
- **title** – window title
- **default** – default button as boolean (OK=True, Cancel=False)

**Return type** bool

## 4.4 ask\_string()

`psidialogs.ask_string (message='Enter something.', default='', title='')`

Show a box in which a user can enter some text.

You may optionally specify some default text, which will appear in the entry-box when it is displayed.

Returns the text that the user entered, or None if he cancels the operation

*screenshots*

### Parameters

- **message** – message to be displayed.
- **title** – window title
- **default** – entry-box default string
- **ok** – label of the ok button
- **cancel** – label of the cancel button

**Return type** None or string

## 4.5 ask\_yes\_no()

`psidialogs.ask_yes_no (message='', default=0, title='')`

Display a message with choices of Yes and No.

**returned value:** Yes -> True No -> False

*screenshots*

### Parameters

- **message** – message to be displayed.
- **title** – window title
- **default** – default button as boolean (YES=True, NO=False)

**Return type** bool

## 4.6 choice()

`psidialogs.choice(choices=[], message='Pick something.', default=None, title='')`

Present the user with a list of choices. return the choice that he selects. return None if he cancels the selection.

*screenshots*

### Parameters

- **choices** – a list of the choices to be displayed
- **message** – message to be displayed.
- **title** – window title
- **default** – default string of choice

**Return type** None or string

## 4.7 error()

`psidialogs.error(message='Error!', title='')`

Display a warning message

*screenshots*

### Parameters

- **message** – message to be displayed.
- **title** – window title

**Return type** None

## 4.8 message()

`psidialogs.message(message, title='')`

Display a message

*screenshots*

### Parameters

- **message** – message to be displayed.
- **title** – window title

**Return type** None

## 4.9 multi\_choice()

`psidialogs.multi_choice(choices=[], message='Pick as many items as you like.', default=None, title='')`

Present the user with a list of choices. allow him to select multiple items and return them in a list. if the user doesn't choose anything from the list, return the empty list. return None if he cancelled selection.

*screenshots*

#### Parameters

- **choices** – a list of the choices to be displayed
- **message** – message to be displayed.
- **title** – window title
- **default** – default list of strings

**Return type** None or list of strings

## 4.10 text()

`psidialogs.text(text, message='', title='')`

This function is suitable for displaying general text, which can be longer than in `message()`

*screenshots*

#### Parameters

- **text** – (long) text to be displayed
- **message** – (short) message to be displayed.
- **title** – window title

**Return type** None

## 4.11 warning()

`psidialogs.warning(message='Warning!', title='')`

Display an error message

*screenshots*

#### Parameters

- **message** – message to be displayed.
- **title** – window title

**Return type** None

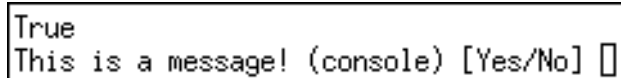

# SCREENSHOTS

## 5.1 ask\_ok\_cancel()

API

### 5.1.1 console

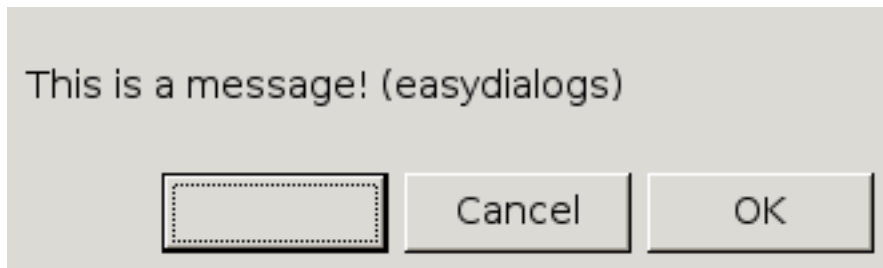

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f ask_ok_cancel"
```

A screenshot of a terminal window. The first line shows the output 'True'. The second line shows the prompt 'This is a message! (console) [Yes/No] ' followed by a cursor.

```
True  
This is a message! (console) [Yes/No] 
```

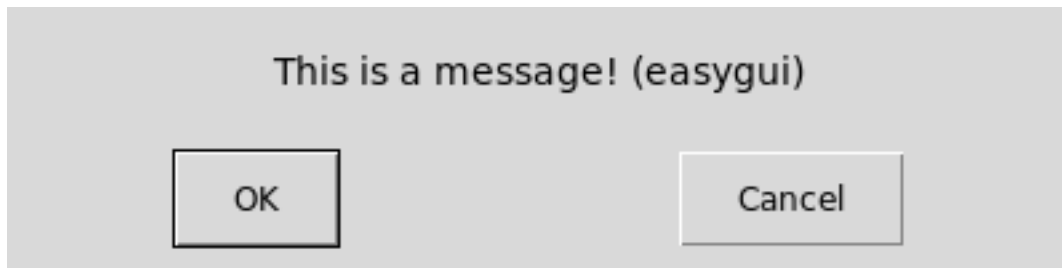

### 5.1.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f ask_ok_cancel
```

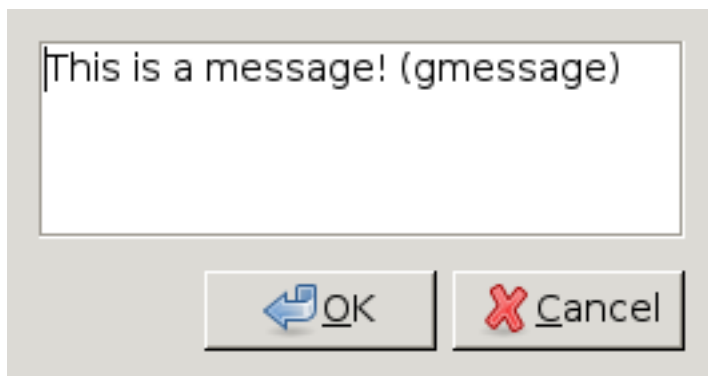

### 5.1.3 easygui

```
$ python -m psidialogs.examples.demo -b easygui -f ask_ok_cancel
```

### 5.1.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f ask_ok_cancel
```

### 5.1.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f ask_ok_cancel
```

### 5.1.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f ask_ok_cancel
```

### 5.1.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f ask_ok_cancel"
```

### 5.1.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f ask_ok_cancel
```

### 5.1.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f ask_ok_cancel
```

### 5.1.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f ask_ok_cancel
```

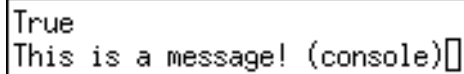

## 5.2 ask\_string()

API

### 5.2.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f ask_string"
```

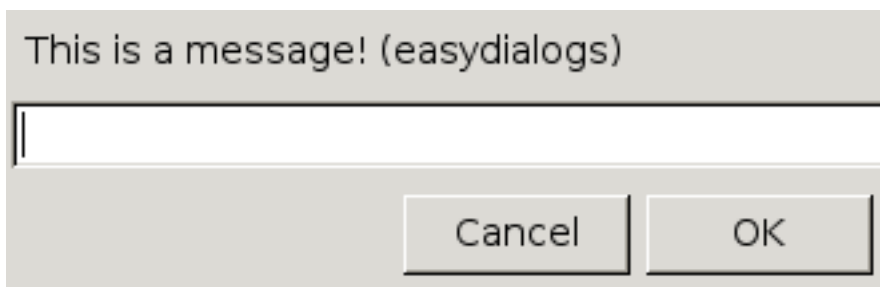

The screenshot shows a terminal window with a black background and white text. The first line is "True". The second line is "This is a message! (console)" followed by a cursor.

```
True
This is a message! (console)
```

### 5.2.2 easydialogs

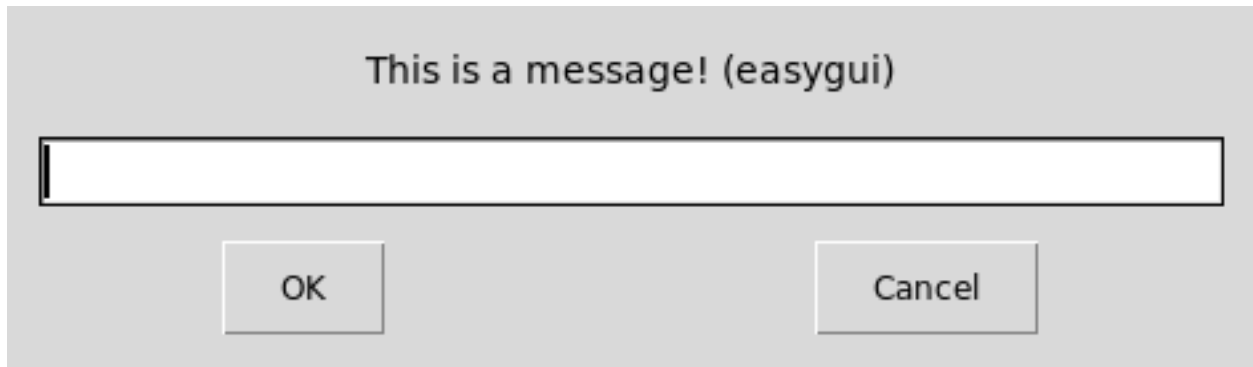

```
$ python -m psidialogs.examples.demo -b easydialogs -f ask_string
```

### 5.2.3 easygui

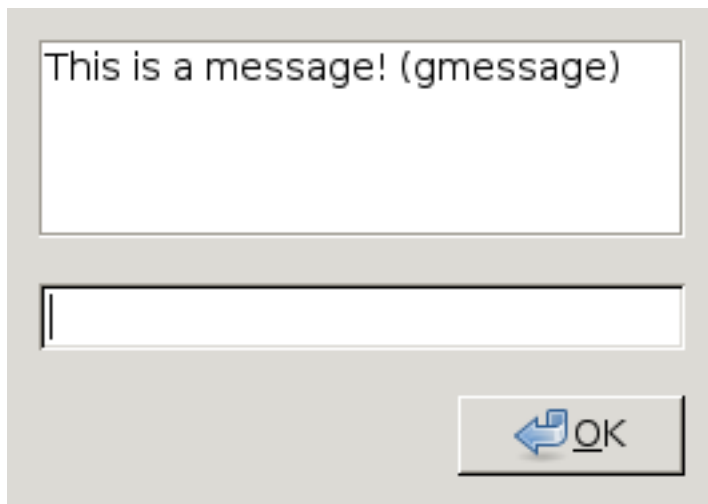

```
$ python -m psidialogs.examples.demo -b easygui -f ask_string
```

### 5.2.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f ask_string
```

### 5.2.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f ask_string
```

### 5.2.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f ask_string
```

### 5.2.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f ask_string"
```

### 5.2.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f ask_string
```

### 5.2.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f ask_string
```

### 5.2.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f ask_string
```

## 5.3 ask\_yes\_no()

API

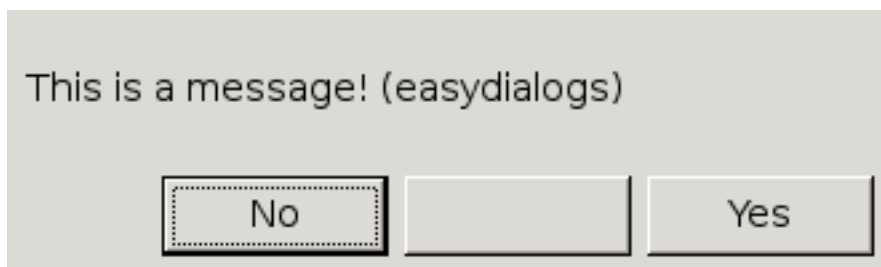

### 5.3.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f ask_yes_no"
```

```
True  
This is a message! (console) [Yes/No] []
```

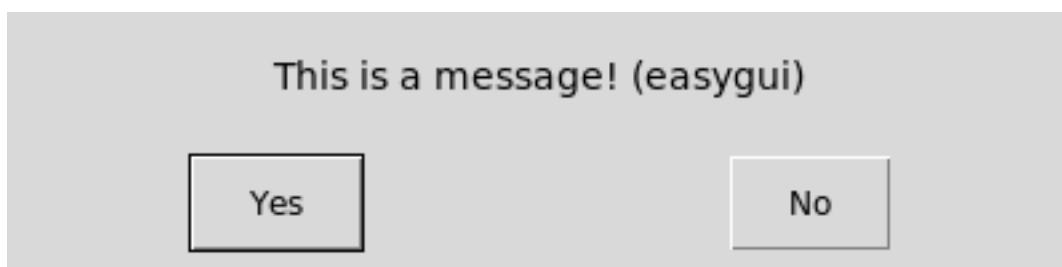

### 5.3.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f ask_yes_no
```

### 5.3.3 easygui

```
$ python -m psidialogs.examples.demo -b easygui -f ask_yes_no
```

### 5.3.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f ask_yes_no
```

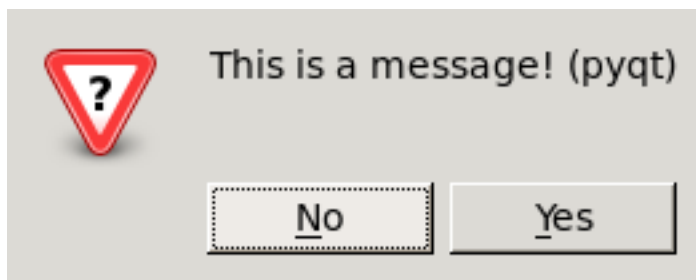

### 5.3.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f ask_yes_no
```

### 5.3.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f ask_yes_no
```

### 5.3.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f ask_yes_no"
```

### 5.3.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f ask_yes_no
```

### 5.3.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f ask_yes_no
```

### 5.3.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f ask_yes_no
```

## 5.4 choice()

API

### 5.4.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f choice"
```

```
True
This is a message! (console)
[0] One
[1] Two
[2] Three
Select:[]
```

### 5.4.2 easydialogs

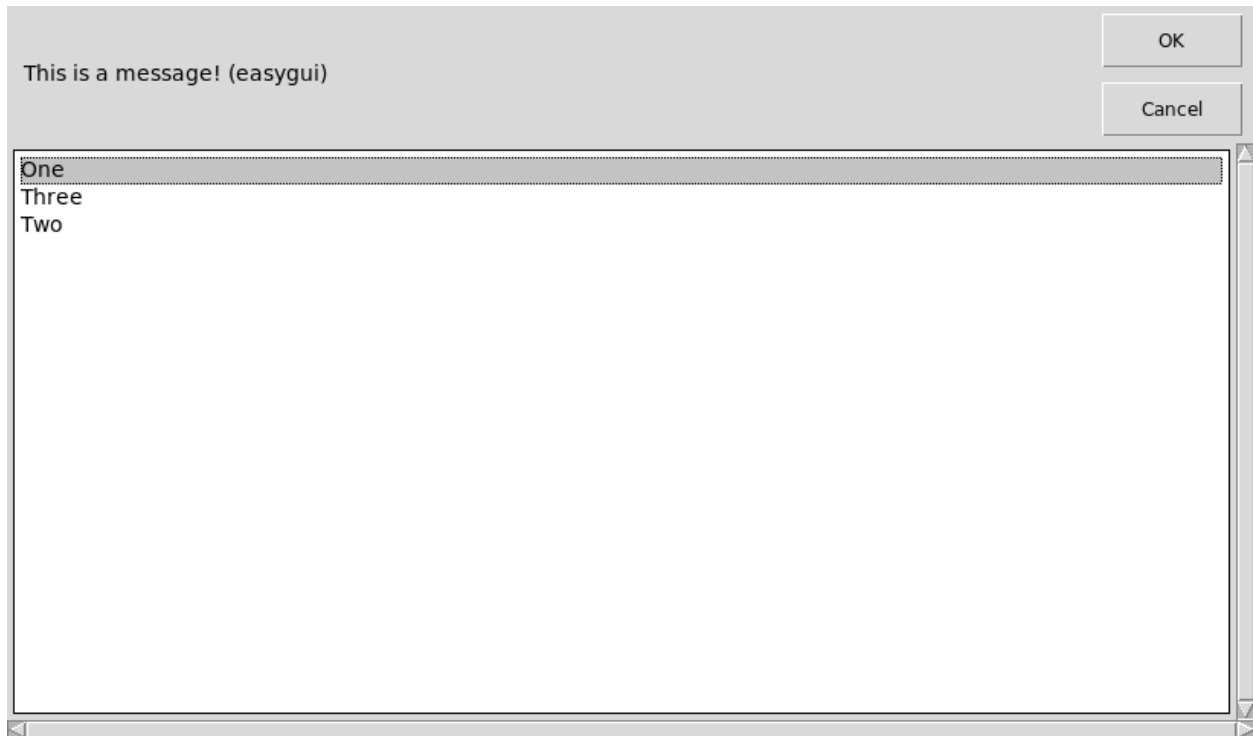

```
$ python -m psidialogs.examples.demo -b easydialogs -f choice
```

### 5.4.3 easygui

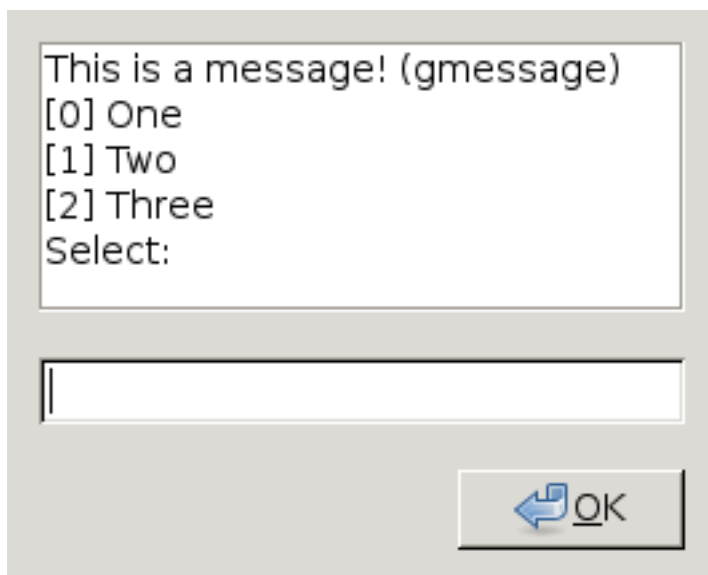

```
$ python -m psidialogs.examples.demo -b easygui -f choice
```

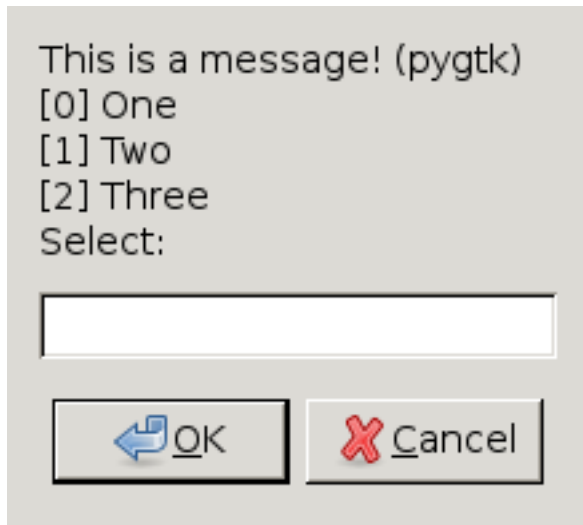

#### 5.4.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f choice
```

#### 5.4.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f choice
```

#### 5.4.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f choice
```

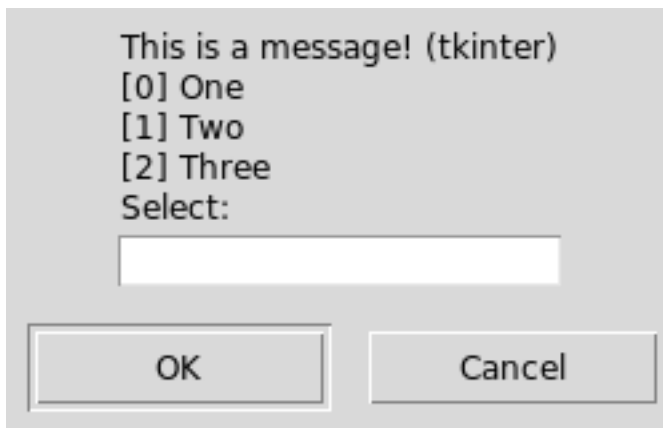

#### 5.4.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f choice"
```

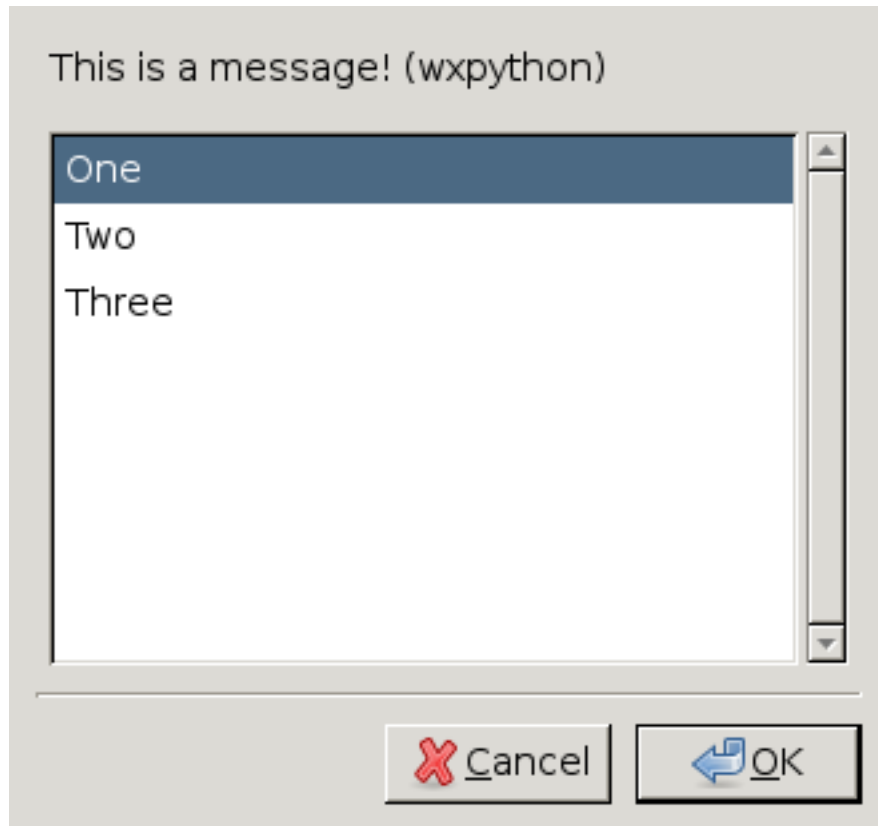

### 5.4.8 tkinter

```
$ python -m psialogs.examples.demo -b tkinter -f choice
```

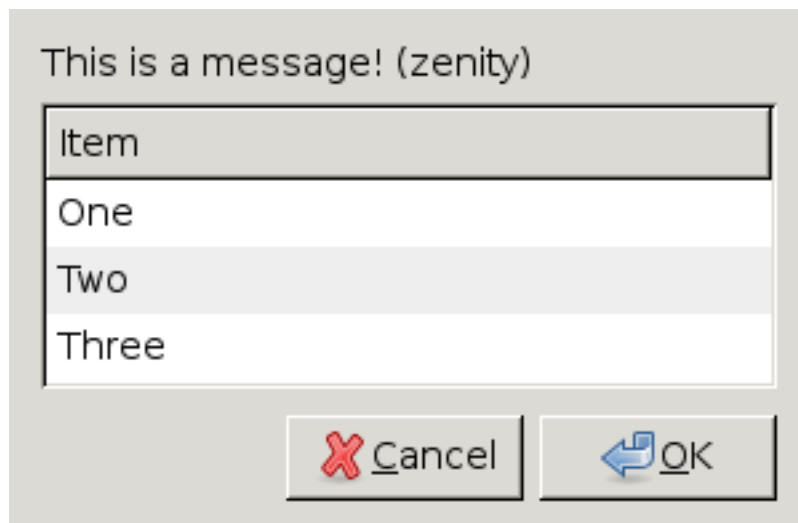

### 5.4.9 wxpython

```
$ python -m psialogs.examples.demo -b wxpython -f choice
```

#### 5.4.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f choice
```

## 5.5 error()

API

### 5.5.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f error"
```

A terminal window with a black background and white text. The text shows the output of a Python script: 'True' on the first line and '[ERROR] This is a message! (console)[ENTER]' on the second line, followed by a cursor.

```
True  
[ERROR] This is a message! (console)[ENTER]
```

### 5.5.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f error
```

A light gray rectangular dialog box with a thin black border. It contains the text 'This is a message! (easydialogs)' in a black sans-serif font.

This is a message! (easydialogs)

A rectangular button with a black border and a dotted inner border. It contains the text 'OK' in a black sans-serif font.

OK

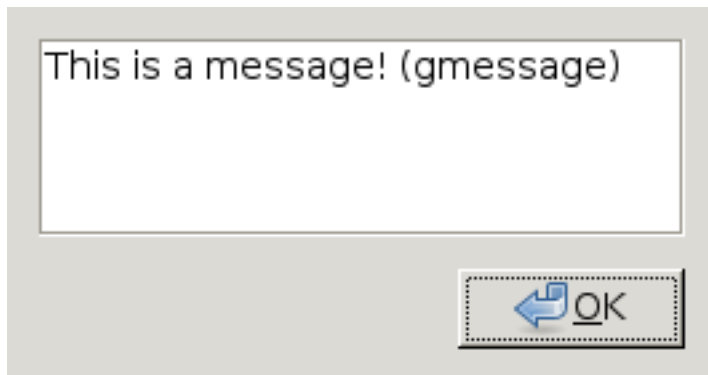

### 5.5.3 easygui

```
$ python -m psidialogs.examples.demo -b easygui -f error
```

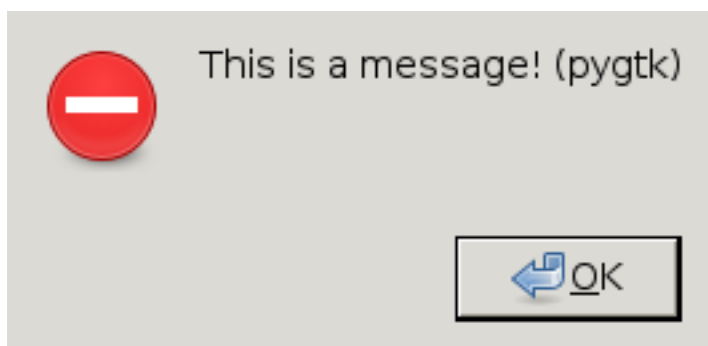

### 5.5.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f error
```

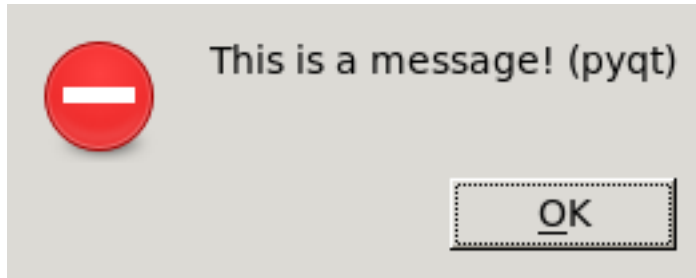

### 5.5.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f error
```

### 5.5.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f error
```

### 5.5.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f error"
```

### 5.5.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f error
```

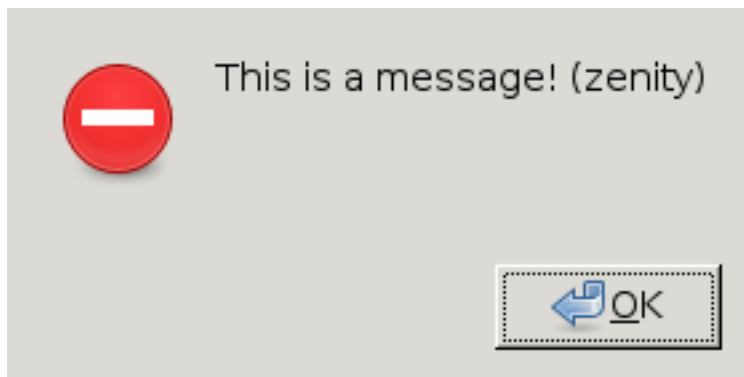

### 5.5.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f error
```

### 5.5.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f error
```

## 5.6 message()

API

### 5.6.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f message"
```

```
True  
This is a message! (console)[ENTER]
```

### 5.6.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f message
```

This is a message! (easydialogs)

OK

### 5.6.3 easygui

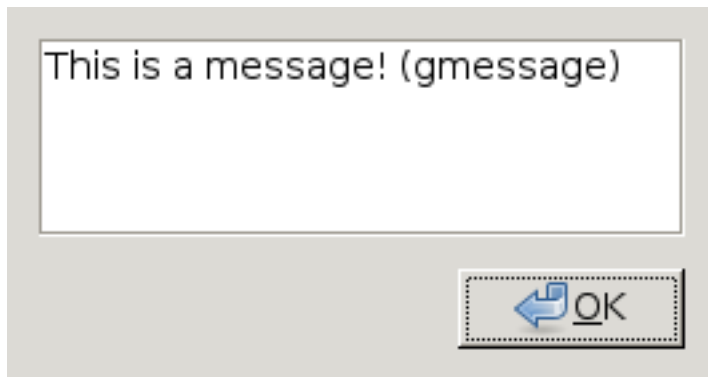

```
$ python -m psidialogs.examples.demo -b easygui -f message
```

This is a message! (easygui)

OK

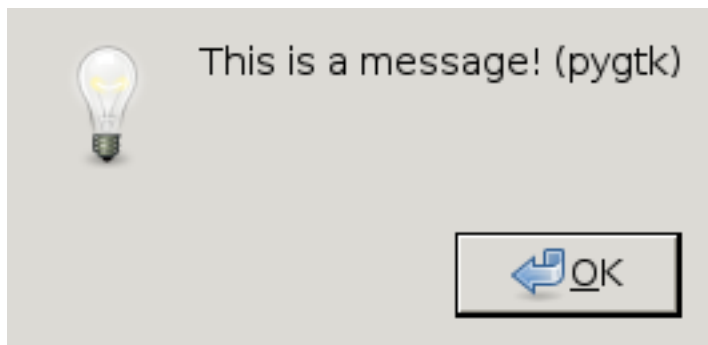

### 5.6.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f message
```

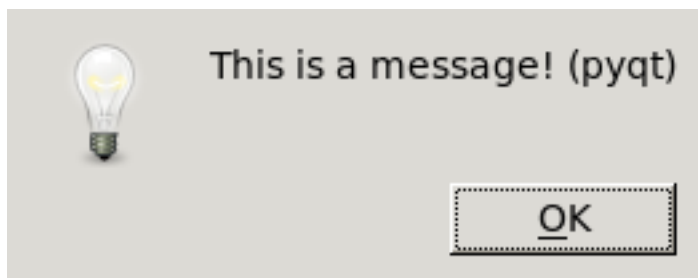

### 5.6.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f message
```

### 5.6.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f message
```

### 5.6.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f message"
```

### 5.6.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f message
```

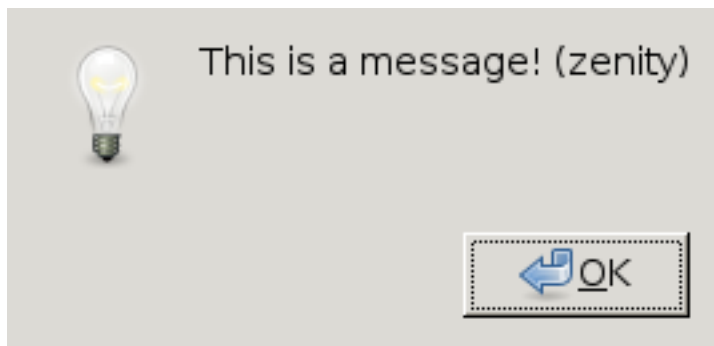

### 5.6.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f message
```

### 5.6.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f message
```

## 5.7 multi\_choice()

API

### 5.7.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f multi_choice"
```

```
True
This is a message! (console)
[0] One
[1] Two
[2] Three
Select:
```

### 5.7.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f multi_choice
```

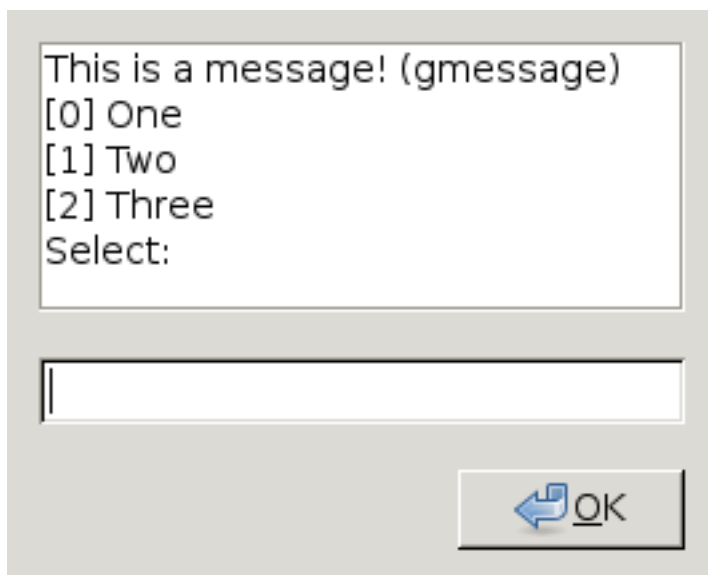

### 5.7.3 easygui

```
$ python -m psidialogs.examples.demo -b easygui -f multi_choice
```

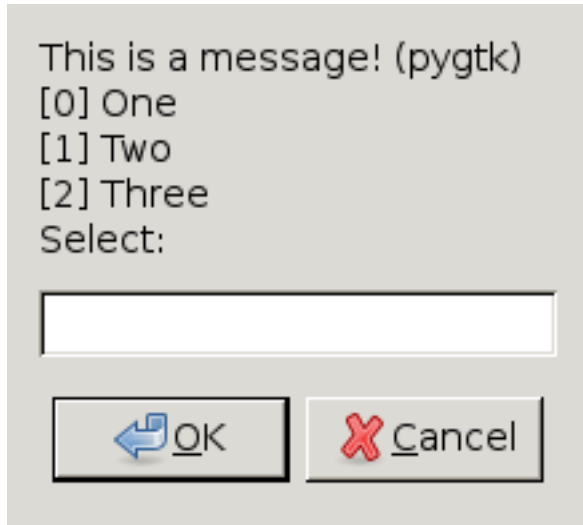

#### 5.7.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f multi_choice
```

#### 5.7.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f multi_choice
```

### 5.7.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f multi_choice
```

### 5.7.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f multi_choice"
```

### 5.7.8 tkinter

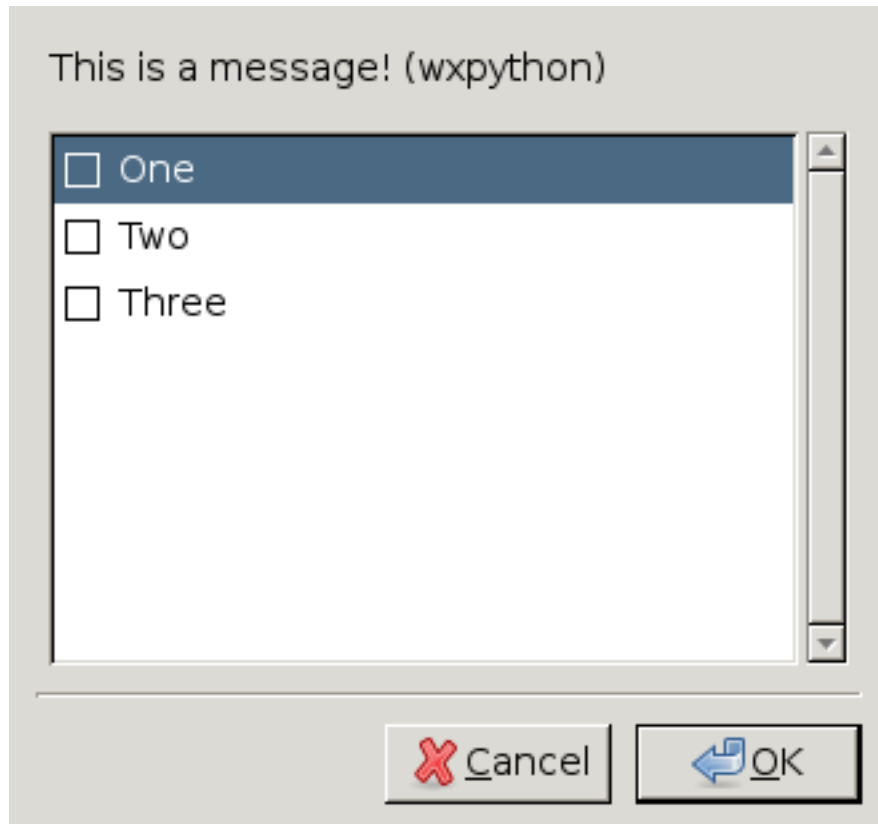

```
$ python -m psidialogs.examples.demo -b tkinter -f multi_choice
```

### 5.7.9 wxpython

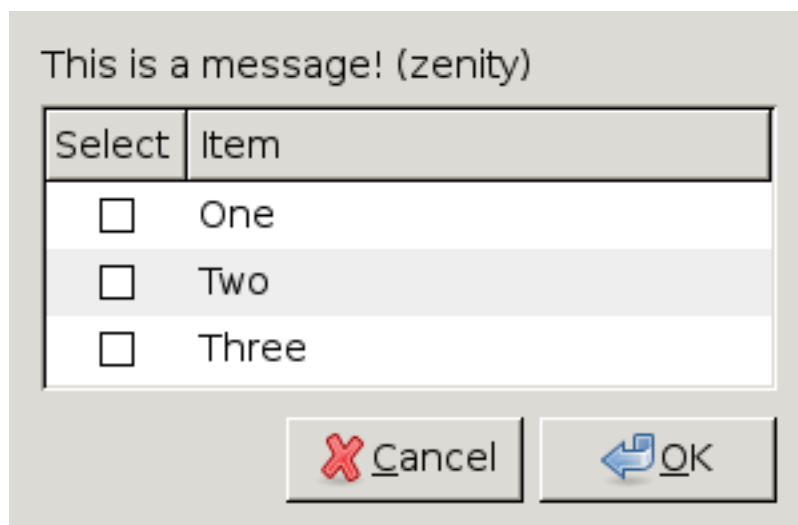

```
$ python -m psidialogs.examples.demo -b wxpython -f multi_choice
```

### 5.7.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f multi_choice
```

## 5.8 text()

API

### 5.8.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f text"
```

```

    while 1:
        #d = dict([(x,backend, x.name) for x in psidialogs.all_backends()])
        #names=sorted(d.keys())
        names=sorted(BackendLoader().all_names)

```

### 5.8.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f text
```

### 5.8.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f text
```

## 5.9 warning()

API

### 5.9.1 console

```
$ xterm -e "python -m psidialogs.examples.demo -b console -f warning"
```

```
True  
[WARNING] This is a message! (console)[ENTER]
```

### 5.9.2 easydialogs

```
$ python -m psidialogs.examples.demo -b easydialogs -f warning
```

This is a message! (easydialogs)

OK

### 5.9.3 easygui

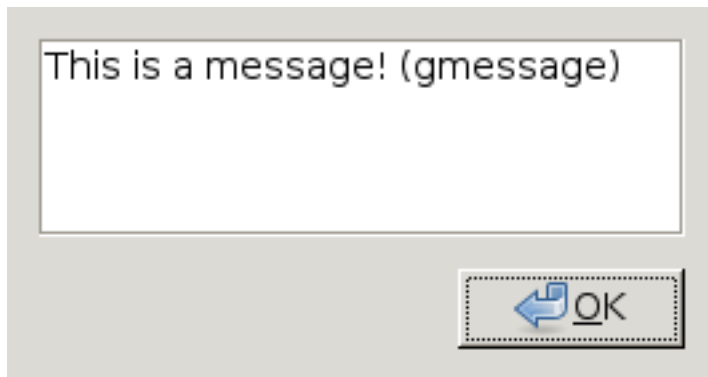

```
$ python -m psidialogs.examples.demo -b easygui -f warning
```

This is a message! (easygui)

OK

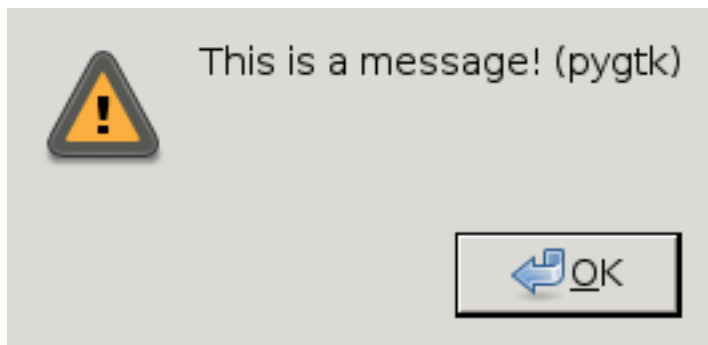

### 5.9.4 gmessage

```
$ python -m psidialogs.examples.demo -b gmessage -f warning
```

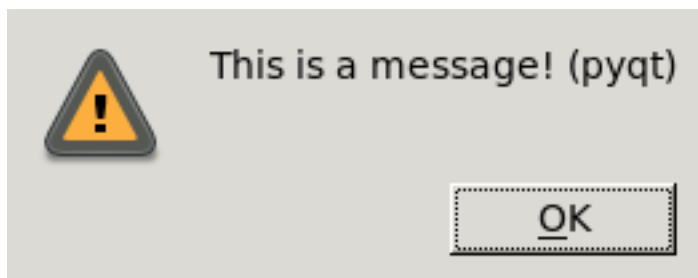

### 5.9.5 pygtk

```
$ python -m psidialogs.examples.demo -b pygtk -f warning
```

### 5.9.6 pyqt

```
$ python -m psidialogs.examples.demo -b pyqt -f warning
```

### 5.9.7 pythondialog

```
$ xterm -e "python -m psidialogs.examples.demo -b pythondialog -f warning"
```

### 5.9.8 tkinter

```
$ python -m psidialogs.examples.demo -b tkinter -f warning
```

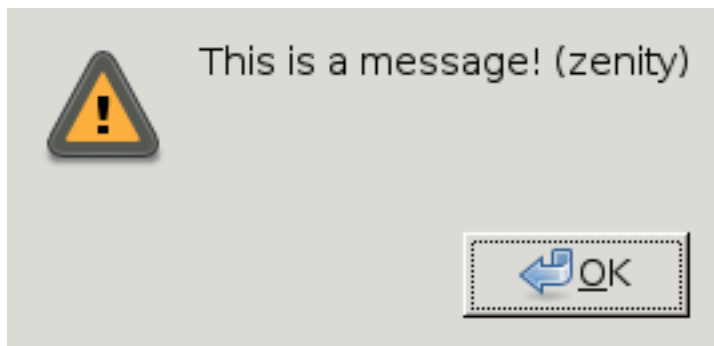

### 5.9.9 wxpython

```
$ python -m psidialogs.examples.demo -b wxpython -f warning
```

### 5.9.10 zenity

```
$ python -m psidialogs.examples.demo -b zenity -f warning
```

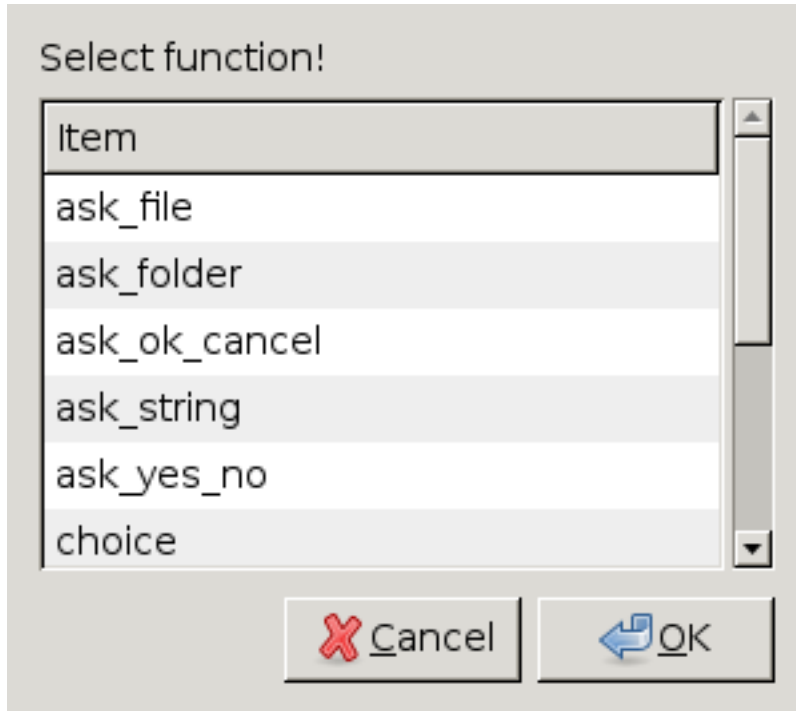

# DEMO

Backends and functions can be selected from list or as command line parameter

```
$ python -m psidialogs.examples.demo
```

```
$ python -m psidialogs.examples.demo --backend zenity
```

```
$ python -m psidialogs.examples.demo --backend zenity --function message
```

## 6.1 command line help

```
$ python -m psidialogs.examples.demo --help
usage: demo.py [-h] [-b BACKEND] [-f FUNCTION] [-t TITLE] [--debug]
```

optional arguments:

```
-h, --help            show this help message and exit
-b BACKEND, --backend BACKEND
-f FUNCTION, --function FUNCTION
-t TITLE, --title TITLE
--debug              set logging level to DEBUG
```

# DEVELOPMENT

## 8.1 Tools

1. `setuptools`
2. `Paver`
3. `nose`
4. `ghp-import`
5. `pyflakes`
6. `pychecker`
7. `paved fork`
8. `Sphinx`
9. `sphinxcontrib-programsscreenshot`
10. `sphinxcontrib-paverutils`
11. `autorun` from `sphinx-contrib` (there is no simple method, you have to download/unpack/setup)

## 8.2 Install on ubuntu

```
sudo apt-get install python-setuptools
sudo apt-get install python-paver
sudo apt-get install python-nose
sudo easy_install ghp-import
sudo apt-get install pyflakes
sudo apt-get install pychecker
sudo easy_install https://github.com/ponty/paved/zipball/master
sudo apt-get install scrot
sudo apt-get install xvfb
sudo apt-get install xserver-xephyr
sudo apt-get install python-imaging
sudo apt-get install python-sphinx
sudo easy_install sphinxcontrib-programsscreenshot
sudo easy_install sphinxcontrib-programoutput
sudo easy_install sphinxcontrib-paverutils
```

## 8.3 Tasks

[Paver](#) is used for task management, settings are saved in `pavement.py`. [Sphinx](#) is used to generate documentation.

print [paver](#) settings:

```
paver printoptions
```

clean generated files:

```
paver clean
```

generate documentation under *docs/\_build/html*:

```
paver cog pdf html
```

upload documentation to [github](#):

```
paver ghpages
```

run unit tests:

```
paver nose
#or
nosetests --verbose
```

check python code:

```
paver pyflakes
paver pychecker
```

generate python distribution:

```
paver sdist
```

upload python distribution to [PyPI](#):

```
paver upload
```
